application designed to work as**

either a server, or as a client for the Java programming language.

Created as a single, portable instance, this program offers two modes of operation: one being binary mode, and the other being plain text. The client's functionality is first to perform connection-oriented communication, the result of

---

which being either the generation of the protocol, the transmission of the said data in HEX format, or the saving of said data to disk, for offline use. A server, on the other hand, is designed to process the information, and perform the requested actions. Having a single, portable instance, Simple Socket Tool requires of its users to have

---

Java installed on their machines. Moreover, the app allows for the transmission of binary data, and users can choose for their data to either be sent in HEX format, or in plain text. If the latter is the case, the user is to fill in the requested fields, including the IP address, port number, and the name of the server that the

---

application needs to connect to. This application's settings bank allows users to choose between two modes, one being the HEX, and the other being text. This translates into one of the following: — HEX (Default): The app will send the byte values, in hexadecimal format, through the network. — Text: The app will

---

send the data, in plain text,  
through the network. Simple

The developers who need to establish communication between different Java-based apps have the choice of resorting to Java Socket programming, which can be both

connection-oriented, or connection-less. The main working principle is constituted by two components, namely a server and corresponding client.

Designed specifically in order to tackle the issues that might arise when running Java Socket, Simple Socket Tool will provide users with the means to create the server

and client components for the connection. The application will allow one to send the resulting data in HEX format and, if required, save

allows the creation of a  
connection-oriented or connection-  
less server and corresponding

The app is extremely easy to use,  
and should be considered by

---

developers for their future projects, considering the ease with which they can install, set up, and run the server and client components. Use cases:

===== Creating a connection-based server and corresponding client between two Java-based apps. For connection-less client apps, the app will

---

enable the creation of two main components, namely the server and client. For the client, the app will let one to set the transmission to the following options: plain, hex, and binary. Furthermore, the transmission can be received by the server and the received data can be set to plain, hex, or binary. This allows for the creation of

---

various clients. The server and corresponding client will be able to be saved for offline use. 2.1 Introduction 2.2 Main features 2.3 How to use 2.3.1 How to use on iOS 2.4 Screenshots 2.4.1 iOS main screen 2.4.2 iOS app store 2.4.3 iOS app store 2.4.4 iOS app store 2.5 Version history 2.5.1 March 20, 2017 App Review
