The oncofetal antigen alpha-1-acid glycoprotein (AGP) is known to be expressed in some normal and malignant epithelial tissues. We therefore investigated the expression of AGP in uterine leiomyomas by immunohistochemistry using a monoclonal antibody against AGP (P2D7) and the immunoglobulin G fraction of P2D7 as a control. The study included eight normal uteri, 14 leiomyomas of the non-myometrial submucosal type, seven leiomyomas of the muscular submucosal type, and eight leiomyosarcomas. AGP was expressed in the cytoplasm of the smooth muscle cells of the myometrium, leiomyomas of the non-myometrial submucosal type, and leiomyosarcomas. The percentage of positive cells varied between 1% and 100% in the uterine myometrium, 0.2% to 80% in the non-myometrial submucosal leiomyomas, and 0.7% to 89% in leiomyosarcomas. There were no significant differences in the percentage of positive cells between the uterine myometrium and the non-myometrial submucosal leiomyomas. However, leiomyosar 4bc0debe42
