Files: DataWedge is a lightweight front-end for SQLite databases, which helps you to write complex queries and returns correct results. Key features: ● Store your queries in a database. ● Works with SQLite databases. ● Export to CSV, MS Excel, MS Access or MS SQL. ● Supports columns of different types. ● Support for a lot of different databases and table types. ● Click on the fields in the results table to sort the data. ● File browser support. ● Save the data in the database as CSV, Excel, Access or SQL. ● Automatically detects column types. ● Open multiple files. ● Lazy loading. ● Free. ● No support for Android or iOS. DataWedge Description: DataWedge is a tool that allows you to create queries in SQL and then store these queries in a database. The database contains all the data and you can later use the database to write queries that will let you easily fetch data from the database. * * * DataWedge uses an SQLite database (if it is installed). This is not a full featured database as it does not support transactions or complex queries. If the database is installed in the system path, DataWedge should work fine (it will automatically locate it). If the database is installed in a different location, then you can use an option to configure DataWedge. DataWedge supports a wide variety of databases. It can read and write databases of SQLite, MS Access, MS Excel and MS

SQL. DataWedge supports a wide variety of tables. It can read and write databases containing normal tables as well as databases containing views and tables of views. If the database is in the system path, DataWedge will detect it and the tables in the database will be detected as well. If the database is not in the system path, then you can provide the database path in the 1d6a3396d6
