SD Cropper is a folder cropping application for Windows Vista. SD Cropper was designed to make quick work of cropping a folder full of images. Cropper is designed to do two things: 1) give you control over what part of a picture makes it into the print, 2) allow you to whip through a folder full of photos in record time. Cropper lets you whip quickly through a lot of photos and pull out the bits of the images you want to include in your album page. Pick the aspect ratio you want (1x1, 4x6, 8x10), use your mouse to draw a rectangle, and click "save crop". SD Cropper also offers an array of features, such as the ability to rotate and crop your image, crop an area around an exact pixel coordinate, and even crop multiple images in one easy to use interface. Features:

Rotation Rotation of an image is the ability to rotate an image in portrait or landscape format. This is helpful when dealing with pictures where you have wanted to fit it into a certain size container.

Bicubic Crop Crop an area to a exact pixel coordinate. This is used if you have a photo that is slightly off-center. With the button selected, the crop can be adjusted in size.

Auto-Crop This feature will crop an image to the best aspect ratio, in relation to the number of people in the image.

Bicubic Crop Crop an area to a exact pixel coordinate. This is used if you have a photo that is slightly off-center. With the button selected, the crop can be adjusted in size.

Auto-Crop This feature will crop an image to the best aspect ratio, in relation to the number of people in the image.

Rotate Rotate an image around the center of the image, allowing you to turn any photo into landscape or portrait.

Crop Apply a crop around the center of the image, allowing you to crop an image to an exact pixel coordinate.

Manual Crop Apply a crop around the center of the image, allowing you to crop an image to an exact pixel coordinate. Use the mouse to define an area of the picture that will be used as the cropping rectangle
