Total Service and Driver Control is a powerful application that can stop or remove unwanted drivers and services from the OS. It is aimed at advanced users exclusively, due to the high degree of risk some of the operations imply. Control drivers and services The program was designed to allow the cleanup of old drivers that clutter the OS and to facilitate access to services that are no longer in use, hence they can be erased in order to provide better performance. Note that some of the changes are irreversible and could render the system as unusable, which is why the program should fall in the hands of experienced users, with extensive computer know-how. The advantages of being portable It comes in the form of a portable application, hence there's no need to go through an installation process. The first time you launch it, the program displays a screen that sums up the functionality of the software, which you should read carefully in order to assess the risks associated with the removal of various components. Scan your system for drivers and services You are required to patiently wait until the program retrieves the list of drivers and services residing on your system in order to access the main window. All of the components will be enumerated in the main GUI, alongside their current status: running or stopped. You can retrieve a detailed description for each one, as well as to remove, start or stop it. In case you opt for removal, a restart process will be required for the changes to take effects. It is highly recommended to use a registry checking program once you've made the changes, as some class IDs may be pointing to an orphaned driver or service. Bottom line TSDC - Total Service and Driver Control is an application that deals with very sensitive areas of the computer. Improper use may lead to a series of incompatibilities and OS failures, unless you really know what you're doing.
