What's New In?

Cacoo Diagramming for Confluence is a simple and useful plugin that helps you to easily insert Cacoo diagrams such as wireframes, UI mockups and UML diagrams into your Confluence pages. By using Cacoo Diagramming for Confluence you are able to add macros inside your wiki pages by specifying the diagram's URL address. In order to use Cacoo Diagramming for Confluence you only need to add the Cacoo Sitemaps to the confluence and configure it according to your needs. Once Cacoo Diagramming for Confluence is configured it's possible to insert a Cacoo diagram such as wireframes, UI mockups and UML diagrams by simply copying the diagram's URL address on a wiki page. Wiki page containing Cacoo Diagramming for Confluence macros: Global confluence configuration: URL to your confluence account: URL to your confluence account: Macros capabilities: Wireframes are wireframe drawings used to illustrate the structure of a particular concept, task, or idea. Wireframes are often used as an initial step in the production of a graphical representation, product, document, or website. Wireframes allow the design of a website to be reviewed quickly by all stakeholders involved in its creation. This plugin is only useful for Confluence wiki pages, if you want to add Cacoo diagrams to a Confluence wiki page you can use the Cacoo Sitemaps plugin instead. This example shows how to insert a Wireframes mockup into a Confluence page. Initial wireframe mockup:

System Requirements For Cacao Diagramming For Confluence:

Supported Resolution: Supported Texture Quality: Audio Requirements: Supported Audio Codecs: Known Issues: Videos and screenshots will be live with the updated client, so look for the following when the Beta gets pushed:Q: Determining an image's category I have the following methods to detect a specific image type (icon) and a specific category: private function detectIcon(\$file, \$icon, \$version = false) | if(preg_match("/^([a
